

Disclosure: Turn Job Applications into *Conversations*

TRINITY COLLEGE
HARTFORD, CONNECTICUT

Nnaemeka Okonkwo

Advisor: Prof. Jonathan Johnson

Department of Computer Science

| The Problem

The modern job search is high-volume, chaotic, and largely manual. Candidates submit dozens of applications into Applicant Tracking Systems (ATS) and face an industry average response rate of **less than 2%**.

Applying passively guarantees silence. To secure an interview, candidates must bypass the automated queue and connect directly with hiring managers—a process that is entirely unmanageable at scale with traditional tools.

Finding the right contact, retrieving their email, and crafting a personalized pitch for every role is **the gap between applying and interviewing**. Disclosure closes it automatically.

| What It Does

Disclosure is an automated career assistant that bridges applying and interviewing. It securely reads a user's Gmail inbox to detect application confirmation emails and track progress without any manual input.

Rather than a passive dashboard, Disclosure acts as an **outreach engine**, instantly surfacing the right contact and drafting a personalized, context-aware pitch the moment a new application is logged.

| The Outreach Engine

1 Background Sync
The Gmail API monitors the inbox continuously, detecting application receipts and mapping each company and role to the user's dashboard automatically.

Gmail API

2 Contact Discovery
An automated workflow analyzes the company and surfaces the hiring manager's direct email address with no manual research required.

Automated Enrichment

3 AI-Drafted Outreach
Gemini 2.5 Flash Lite drafts a highly personalized, context-aware outreach email, ready for one-click sending, transforming an anonymous application into a warm introduction.

Gemini 2.5 Flash Lite

| Intelligent Features

Smart Silence Detection

Background schedulers monitor application timelines and automatically prompt the user to follow up if a company has gone quiet for 14 days.

Instant Interview Prep

When an interview invitation is detected, Server-Sent Events (SSE) stream a custom, AI-written preparation guide directly to the user's screen in real time.

| Acknowledgements

Thank you to **Professor Jonathan Johnson** and **Professor Ken Kousen** for their invaluable technical guidance and steadfast support throughout this project.

Deep gratitude to the **Trinity College Department of Computer Science** for being the academic home that made this work possible.
